EDUCATION

Arizona State University

Tempe, AZ

Bachelor of Science in Computer Science GPA: 4.0/4.0 Dean's List

Aug. 2023 – May 2027

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, HTML, CSS

Frameworks: React, Next.js, Node.js, Express.js, FastAPI, Redux Toolkit, Tailwind, Recharts, SQLAlchemy

AI/LLM: Claude API, OpenAI API, Prompt Engineering, Pydantic, Structured Outputs

Databases: MongoDB Atlas, MySQL

Tools & Cloud: Git, GitHub, Docker, Postman, Vercel, Render, Railway, Streamlit Cloud, VS Code

EXPERIENCE

Full-Stack Web Development Intern

Sep. 2024 – Oct. 2024

Prodigy InfoTech

Remote (Mumbai, India)

- Shipped a MERN authentication portal with JWT sessions, bcrypt password hashing, rate-limited endpoints, and role-based access control on React routes and Express middleware.
- Built a full-stack Employee Management System with admin-only CRUD, server-side search/filter/sort, and a MongoDB aggregation pipeline dashboard surfacing real-time headcount, average salary, and department breakdowns.

Junior Data Analyst

Jun. 2025 – Jul. 2025

Food Forest AI

Remote (Philadelphia, PA)

- Built Python and Pandas QA scripts to flag missing values, anomalies, and formatting errors across 500+ scraped supplier profiles, reducing manual review load and producing ingestion-ready datasets that improved search result quality.
- Standardized scraped capabilities, certifications, and product data into structured enrichment datasets powering Food Forest AI's B2B supply chain search engine.

PROJECTS

Goalsetter+ | React, Node.js, Express, MongoDB Atlas, Redux Toolkit, Claude API, Recharts

[Live](#) | [GitHub](#)

- Built and deployed a full-stack MERN goal tracker with JWT auth, sub-tasks, natural language date parsing, overdue detection, and revokable public share links.
- Integrated the Claude Haiku API to generate three SMART goal suggestions from plain-English input, with rate limiting and one-click add to the goals list.
- Built a Recharts analytics dashboard with goals-by-category and completions-over-time charts, computed client-side from Redux state to eliminate redundant API round-trips.

NBA Teams Dashboard | Next.js 16, TypeScript, Tailwind CSS, Framer Motion

[Live](#) | [GitHub](#)

- Designed an editorial-style dashboard for all 30 NBA franchises with Next.js 16 App Router and async Server Components; migrated to a self-hosted data layer (JSON snapshot + 30 PNG badges) after the public API became unreliable.
- Built non-blocking live search with React 19's useDeferredValue, per-team accent colors from team metadata, skeleton loading states, and route-level error.tsx and not-found.tsx boundaries.
- Engineered a flash-free dark/light theme toggle with an inline script reading localStorage and prefers-color-scheme before first paint, plus a full a11y pass with semantic landmarks, focus rings, and ARIA live regions.

LLM-Powered Multilingual Feedback API | Python, FastAPI, OpenAI API, Docker, Pydantic

[GitHub](#)

- Built a FastAPI service that analyzes learner-written sentences and returns structured JSON (corrected sentence, error list, CEFR difficulty estimate, correctness flag); selected GPT-4o-mini as a cost/latency tradeoff with few-shot prompting.
- Implemented a Pydantic validation layer to normalize imperfect model outputs; wrote 10+ unit, schema, and integration tests covering non-Latin scripts and edge cases.

Sales Insights Dashboard | Python, MySQL, SQLAlchemy, Streamlit, Plotly, Pandas

[Live](#) | [GitHub](#)

- Designed a MySQL pipeline over 94,073 transactions with a sales_cleaned view that normalized multi-currency data, joined 5 dimension tables, and resolved 7 data-quality issues.
- Authored 10 KPI queries using window functions (LAG() and SUM() OVER PARTITION BY), surfacing customer concentration risk where one customer drives roughly 33% of INR 51.77 Cr total revenue.
- Deployed an interactive Streamlit and Plotly dashboard with year, market, and zone filters on Streamlit Cloud, backed by a Railway-hosted MySQL database with a CSV fallback for production resilience.
